Apache, MySQL, Tomcat, and Java are the core building blocks of any Web application. It doesn't matter if you are looking to start a new application, or if you need to enhance an existing one, you will need a fully functional Web server. In this bundle, you will find a free, fully-tested Apache 2.2, MySQL 5.1 and Tomcat 6.0, which will allow you to deploy, manage and scale your Web applications. You will also receive a PHP 5.2, which you can use to add a dynamic content to your site, and a Java Runtime Environment (JRE). BitNami Tomcat Stack virtual machine is configured to read Tomcat-6.0 configuration file. BitNami Tomcat Stack supported languages and operating systems: You can use BitNami Tomcat Stack to launch your Java Web application, such as JSP, Java Server Faces (JSF), Servlet and Java Enterprise Edition (J2EE). BitNami Tomcat Stack also includes Java WebStart, the integrated Java program that makes the launching process of your application and its update easy. Setting up a Java-based Web application is made possible by other Java components that are included in this bundle, such as: Automated build and application distribution services, such as Apache Maven. Git, a free, fast and powerful version control system for Java applications. The Glassfish application server, free and open source implementation of J2EE specifications. Web services and Web application security, as well as HTTP compression and encryption capabilities. All the tools you need, including mod_rewrite, which allows you to change the URLs of your Web applications for better usability; mod_jk, which allows you to distribute your Java-based Web application, using an HTTP load balancer, across two or more servers; mod_proxy, to make your existing Apache server act as an HTTP proxy; mod_proxy_http, to make your server act as a reverse proxy; mod_alias, for using URL rewriting; and mime-magic, which helps to add dynamic content to your Web applications.
